Dear Mr. Lastra:

THIS LETTER IS THE AMENDMENT TO THE CLAIMS: CLAIMS 1-10.

CLAIMS 1-10 ARE CANCELED AND 11, 12, 13, AND 14 ARE HEREIN ON FAX
PAGES 2 AND 3.

Thank you,

William Kish

Enhancement incentive system using an employee action generating an improved wage
on a distributed network.

11. A system using an employee action to generate an earning, comprising:

    a. plurality of client computers connected to a network, upon which an
       employee identification profile is entered and transmitted to a server
       computer;

    b. a server computer connected to the network, which performs the steps of:
       receiving the employee identification profile;
       generating points based upon an employee action;
       exchanging points between employees; and
       updating the employee identification profile based upon the action,
       earning or point conversion

12. The system of claim 1, which performs the steps further:
       Converting points to employee units where each unit has value and the
       employee selects from the group of equity, cash, product and services;
       Selling or purchasing points.

13. The system of claim 1, which performs the steps further:
       a work shift has a point value;

2

exchanging work shifts having point value, which the employee can offer

points in exchange.

14. The system of claim 1, which performs the steps further:

   customer identification profile;

   providing employee assignment of customers;

   recording customer preference, request and frequency;

   stores the assignment, action, request, frequency in a database.

Re: Review of Tuesday's 1/18/05 conference call

Pages 2

Dear Daniel Lastra:

I have edited Claim 3; <u>potential</u> is eliminate, Claim 4; <u>customer preference and frequency have been added.</u>

Enhancement incentive system using an <u>employee action</u> generating an <u>improved wage</u> on a distributed network.

1. A system using an employee action to generate an earning, comprising:

    a. plurality of client computers connected to a network, upon which an employee identification profile is entered and transmitted to a server computer;

    b. a server computer connected to the network, which performs the steps of:

        receiving the employee identification profile;

        generating points based upon an employee action;

        exchanging points between employees; and

1

updating the employee identification profile based upon the action, earning or point conversion

2. The system of claim 1, which performs the steps further:

Converting points to employee units where each unit has value and the employee selects from the group of equity, cash, product and services;

Selling or purchasing points.

3. The system of claim 1, which performs the steps further:

a work shift has a point value;

exchanging work shifts having point value, which the employee can offer points in exchange.

4. The system of claim 1, which performs the steps further:

customer identification profile;

providing employee assignment of customers;

recording customer preference, request and frequency;

stores the assignment, action, request, frequency in a database.
